18:30 RETURNING

The Department of Agricultural Sciences at the University of Naples "Federico II" has its headquarters in the prestigious Royal Palace of Portici, a building commissioned by Charles of Bourbon. The construction of the Royal Villa was completed in 1742. Many aristocratic families of the time also built their villas in the surrounding area, creating a concentration of palaces and gardens known today as the "Ville Vesuviane", a cultural patrimony of great importance.
