

2) RESEARCH & INNOVATION: Explore Horizon 2020 participation statistics

It is with great pleasure that we can announce today the launch of the HORIZON 2020 DASHBOARD on the Participant Portal. This novel view on Horizon 2020 implementation data provides powerful analytical functions, with new opportunities for programme reporting, impact analysis, preparing feedback to policy making and decision making on future priorities. All data can be viewed and analysed in aggregated form but also detailed views on individual calls, topics, countries, organisation types etc. are possible, down to the level of individual projects and beneficiaries (including links to the individual project pages on CORDIS).

In its initial version, two sets of functionalities are provided:

- Aggregated Data on participation in proposals
- Aggregated and detailed data on funded projects

These views are accessible directly via the Participant Portal home page and via the new portal page Projects & Results.
