B. PROJECT PROPOSAL DETAILS

Before completing this section please refer to the corresponding Call information and Work Programme which includes topic, scope, expected impact, funding scheme and any other related information.

FP7 Theme	HEALTH
Call Identifier	
Topic in the Work Programme	- Strategies and interventions for improving reproductive health. -Child and adolescent mental health.
Proposal Acronym	- HEALTH-2009-4.3.2-1 - HEALTH-2009-3.3-1
Proposal Title	-International Public Health and Health Systems -Enhanced Health Promotion and Disease Prevention
Funding Scheme	Collaborative Project
Description of the Proposal	High rates of mental disorders have been reported in women in low-income areas of developing countries. The continuous care and attention of children is a demanding task, and poor physical or mental health in mothers might be expected to have consequences on their children's health, nutrition, and psychological well-being. Childhood morbidity and mortality rates are also high in developing countries, and the predominant causes for this are diarrhoea, malnutrition, and other infections. The broad aim is to prospectively study the growth, physical morbidity and psychological development of a representative sample of the children of mothers who either have a depression, or who are psychologically healthy. It is hypothesised that the children of mothers with depression will have higher morbidity, and poorer growth and psychological development than the children of psychologically well mothers. The proposed

PARTNER SEARCH FORM

	<p>research project aims to study a relatively poor rural community for associations between current maternal depression, and their infants' physical morbidity, nutritional status, and psychological development. This will be done in 2 stages, using screening and interviewing methods for depression. In the first stage, a standardised psychiatric interview will be used to define a group of mothers with a diagnosis of depression, and another group without the diagnosis. In the second stage newborns of both groups of mothers will be followed up for five year. (max. 1500 characters)</p>
Keywords	<p>perinatal mental health, postnatal depression, postpartum psychosis, child mental health,</p>
